

How fossil fuels were made 1

Name _____ Class _____

Cut out the boxes at the bottom of the page. Stick them next to the correct pictures.

S knowledge

Coal was formed from dead plants that lived long ago.

More layers of mud buried the dead animals, and they turned into oil and gas. The oil and gas get stuck under a layer of caprock which will not let them through.

The plants and animals fell to the sea bed when they died and got buried in mud and sand. The mud stopped them rotting away.

Oil and gas were formed from tiny plants and animals that lived in the sea millions of years ago.

More layers of the mud squashed the fossils. Heat from inside the Earth turned the mud into rock and turned the plant fossils into coal.

When the plants died they were buried in mud. The mud stopped them rotting away.
